**Report Status - Final****HISTOPATHOLOGY****Histopathology: Medium Tissue Biopsy**

Sample: Tissue

**Lab No : HL-1525-19 & HL-1526-19****Nature of specimen:**

Specimen 1: Gall bladder.

Specimen 2: Right calf swelling.

**Clinical Details:** USG: Adenomyomatosis. ?panniculitis-calf swelling**Gross Description:****Specimen 1**

Received already opened gall bladder measuring 7 cm in length. Mucosa is greenish with yellow streaks. Cystic duct is not identified. Wall thickness is 0.3 cm. No stone present.

**Block : 1****Specimen 2**

Received single unoriented skin covered tissue piece, measuring 1.5x1x0.5 cms.

**Block : 1**

Entire tissue submitted in one block.

**Microscopic Examination:****Specimen 1:**

Mucosa is hyperplastic with some areas of mucosal ulceration. There is submucosal fibrosis with muscular hypertrophy. Chronic inflammatory cells are present in the mucosa and extend transmurally. Rokitansky aschoff sinuses are present. No atypical cellular changes are seen.

**Specimen 2:**

Section examined from submitted biopsy shows stratified squamous epithelium of unremarkable histology. Underlying area shows mixed acute and chronic inflammatory cells comprising of neutrophils lymphocytes and plasma cells, admist within adipose tissue. Few foreign body type of giant cells seen. No atypia or malignancy seen. No granuloma seen.

**Impression :****Chronic cholecystitis.**
