MOLECULAR DIAGNOSTIC**HPV DNA Detector****# * HPV DNA**

Sample: Cervical Brushings in STM

Not Detected

Not Detected

HPV DNA Detector**Interpretation:**

- * A 'Detected' result will show the presence of HPV-High Risk Type.
- * A 'Not Detected' result will show the absence of HPV-High Risk type.

Intended Use:

The test is designed for detection of 14 High-Risk HPV types (16,18,31,33,35,39,45,51,52,56,58,59,66 and 68) as well as Internal Control (IC) in clinical specimen using CE-IVD approved kit and Real-Time PCR.

HPV (Human Papilloma Virus) high risk type are a leading cause of cervical cancer in women. It is associated with 99% of cervical cancer. Most commonly associated high risk HPV types with cervical cancer are HPV 16 and 18. HPV is the most common sexually transmitted infection and is generally asymptomatic. Along with cervical cancer, it can cause cancer of vulva, vagina, penis, anus as well as oro-pharyngeal cancers.

Remarks:

1. Failure to detect HPV DNA does not exclude HPV infection. Infection by other HPV types, low level of infection, sampling error and infection at other anatomical site can lead to false negative results.
2. Assay should be interpreted only in context of other lab findings and total clinical status of the patient.

* Marked tests are processed in our companion laboratories
