Comments

Amino Acids are basic structural units that comprise proteins and are found throughout the body. Amino acid disorders are caused by impaired metabolism or transport of proteins and amino acids which results in accumulation or deficiency of one or more amino acids in biological fluids. Inborn errors of amino acid metabolism usually manifest in infancy & childhood. Affected patients may have failure to thrive, neurological symptoms, digestive problems, locomotor retardation, developmental delays & mental retardation. As essential amino acids are obtained through an individuals diet, treatment for amino acid disorders involves very specific dietary modifications which have to be very closely monitored by periodic amino acid analysis.

* Marked tests are processed in our companion laboratories
