Mantoux / Tuberculin Sensitivity TestClinical Significance :

Mantoux/Tuberculin sensitivity test is an in vivo skin test used to help in the diagnosis of Tuberculosis in persons at increased risk of developing active disease. A standard dose of 1 TU is injected intradermally and the area is examined after 48 to 72 hours for hypersensitivity reaction. The reading is taken by measuring the diameter of the induration only and the erythema is not measured. A positive reading indicates exposure to Tuberculosis.
